PROFESSIONAL SUMMARY

Software Engineering Apprentice at Nike (SCPT Team), experienced in designing scalable applications with Java and Spring Boot. Skilled in AWS cloud infrastructure, microservices architecture, Docker, and NoSQL databases (DynamoDB). Proficient in production issue resolution, real-time monitoring, and system reliability using Splunk and Jenkins. Adept in Agile environments, technical communication, and driving continuous improvement for high-demand consumer platforms.

TECHNICAL PROFICIENCY

Programming Languages: Java (Core & Advanced), Python (basic), OOPs, Exception Handling, Collection Framework

Frameworks/Libraries: Spring Boot, Spring MVC, Hibernate, JPA, JDBC, RESTful APIs, Microservices Architecture

Cloud & DevOps: AWS (EC2, S3, Lambda, IAM), Docker, Linux OS, Networking Basics

Databases: MySQL, Oracle, DynamoDB (NoSQL)

Observability & Service Management Tools: Splunk, Jenkins, ServiceNow, Jira

Version Control & Development Tools: Git, GitHub, Eclipse, VS Code, Gradle, Maven

Methodologies: Agile, Scrum, SDLC, Incident/Problem/Change Management, Testable & Efficient Code

Data Structures & Algorithms: Linked List, Stack, Queue, Set, Map, Tree, Graph, Design and Algorithm

EDUCATION

❖ Master of Computer Application | G.M University, Sambalpur (Odisha)

CGPA: 8.7 | (2022–2024)

❖ Bachelor of Science | Berhampur University, Ganjam (Odisha)

CGPA: 8.4 | (2019–2022)

PROFESSIONAL EXPERIENCE

Software Engineering Apprentice, Nike – SCPT Team (2025–Present)

- Contribute to the design and development of scalable microservices using Java and Spring Boot for supply chain technology solutions.
- Participate in requirements analysis, solution design, coding, code reviews, and deployment as part of the full SDLC.
- Build, deploy, and manage backend systems on AWS cloud infrastructure, utilizing Docker for containerization and DynamoDB for NoSQL data storage.
- Apply Test-Driven Development (TDD) practices, writing comprehensive unit and integration test cases to ensure code quality and reliability.
- Implement real-time monitoring and diagnostics using Splunk and Jenkins to track system health and key performance indicators.
- Collaborate with cross-functional teams in Agile sprints, actively engaging in incident, problem, and change management processes.
- Support production operations by diagnosing and resolving issues, minimizing service interruptions, and ensuring high system reliability.
- Emphasize data validation, exception handling, and performance optimization throughout the application lifecycle.
- Document technical solutions, share knowledge with team members, and contribute to continuous improvement initiatives.

❖ PROJECT: SUPPLY CHAIN MANAGEMENT SYSTEM [GitHub Repository](#)

- Built a robust backend using Spring Boot and MySQL to manage inventory, vendor, and logistics data for supply chain operations.
- Designed and exposed RESTful APIs for product management, shipment tracking, and procurement workflows.
- Implemented exception handling, data validation, and optimized SQL queries to enhance performance and reliability.
- Developed monitoring and diagnostics features using Splunk and Jenkins to support rapid production issue resolution.
- Applied Test-Driven Development (TDD) practices and wrote comprehensive unit and integration test cases to ensure code quality and reliability.

CERTIFICATIONS

- Effective Communication – TCS iON
- Cloud Computing – IIT Kharagpur
- NIIT Software Testing
- Deep Learning – IIT Madras (NPTEL)
